The index of qualitative variation (IQV) is a measure of variability. IQV value varies between 0 and 1, with 0 indicating no variability at all, and 1 indicating perfect variation-cases evenly divided across all categories. In other words, the closer the IQV value is to 1, the more diverse the student population is with regard to race, gender, or the gender/race combination. Non-Specific and Unknown race and gender categories are excluded from the computation of the IQV.

¹ Other includes Native Hawaiian or Other Pacific Islander, Two or More Races, Non-Specific, and Unknown.
